

**2020/2021 DMSMS Team Achievement Award Winner  
Aberdeen Proving Ground Team Command, Control, Communication, Cyber,  
Intelligence, Surveillance and Reconnaissance DMSMS Working Group**

Aberdeen Proving Ground (APG) Team Command, Control, Communication, Cyber, Intelligence, Surveillance and Reconnaissance (C5ISR) DMSMS Working Group (WG) was selected for the DMSMS Team Achievement Award for its proactive and efficient contributions to the Army and DoD DMSMS programs.

Team C5ISR is a multi-disciplinary, cross-cutting and organizationally diverse group of professionals entrusted with proliferating an environment where DMSMS management is proactive, intentional and efficient. Bridging the gap between the professions of engineering, logistics, and the art of contracting, this group coalesces to formulate solutions with tremendous dynamism and energy.

Team C5ISR is responsible for over \$5B of Research and Development (R&D), acquisition, and sustainment activities each year. Requirements for mitigation of DMSMS challenges exhibit over \$60M annually, directly impacting supply availability and readiness. Weapon Systems in this portfolio include fixed, ground, airborne and Solider-based modalities but all include one common denominator: electronics and their associated supply chain challenges. Due to the team's efforts the Army anticipates cost savings and cost avoidance of approximately \$5M over the next one to three years.
